

Following software changes will be in production on October 30, 1997.

ADPICS 2311 - INVITATION TO BID DEFINITION SCREEN

On the ADPICS 2311 Invitation to Bid Definition Screen, when a 'Y' or 'N' with a number was entered in the 'Last Plus X' field, the user would get an abend or would be locked out of the system for long periods of time which would also cause others to be locked out. This happens when the selected commodity is attached to more than 999 vendors from the ADPICS 5420 - Vendor By Commodity Screen.

The software has been modified to prevent abends under these circumstances.

Please note that when selected commodity is attached to a large number of vendors, it could take up to 5 minutes for the vendor selection process to finish.
